PROFESSIONAL SUMMARY

Full Stack Developer & Application Security Engineer with 2+ years of hands-on experience architecting and shipping scalable web applications, high-performance REST APIs, and security-critical systems. Deep expertise spanning Node.js, React, Python, and Django with a strong security engineering focus — including digital fingerprinting, anti-fraud SDKs, injection risk auditing, and OWASP-aligned secure coding practices. Track record includes reducing query response times by 82%, improving deployment frequency by 5x, and leading a 1,800+ user trade-analytics platform end-to-end. Applies AI-augmented tooling (Claude Code, LLMs) to deliver high-quality, security-aware software faster.

CORE FOCUS AREAS

- Application Security Engineering — OWASP Top 10 vulnerability classification, static analysis, injection risk auditing, and integrity verification
- AI-Powered SaaS Development — LLM-integrated products, RAG pipelines, and AI-augmented developer tooling
- Business Process Automation — workflow automation and multi-source data pipelines cutting manual effort by 60%
- Custom Internal Dashboards — real-time, data-heavy fintech & trade-analytics platforms (React, Elasticsearch, PostgreSQL)
- Search & Analytics Solutions — Elasticsearch query engines, aggregations, and high-entropy fraud/integrity systems

TECHNICAL SKILLS

Languages: Python, JavaScript (ES6+), TypeScript, SQL, HTML5, CSS3

Frameworks & Libraries: Node.js, React.js, Django, Express.js, Socket.io, Vite, Bootstrap

Databases & Search: MongoDB, MySQL, PostgreSQL, Elasticsearch, Redis

Cloud & DevOps: GitHub Actions, Nginx, Linux Server Management, Git, Docker

Security: OWASP Top 10, Static Code Analysis, Injection Risk Auditing, Digital Fingerprinting, Anti-Fraud Systems, Secure API Design, Path Traversal / XSS / Auth Flaw Detection

AI-Augmented Development: Claude Code, LLM-integrated tooling (Ollama, RAG pipelines, vector embeddings)

PROFESSIONAL EXPERIENCE

Full Stack Developer — Pythor Innovations, India

Jun 2024 – Present

- Architected and shipped full-stack product features using Node.js and React.js, reducing page load time from 3.2s to 1.1s (65% improvement).
- Optimized database schemas across MongoDB, MySQL, and Elasticsearch, reducing query response time from 450ms to 80ms (82% improvement).
- Built and maintained RESTful APIs handling 5,000 requests/minute with <100ms latency across distributed microservices.
- Championed CI/CD best practices via GitHub Actions pipelines within Agile 2-week sprint cycles.
- Implemented secure API design principles addressing OWASP A01 (Broken Access Control) and A03 (Injection) across production microservices.

Python Developer — Spectrics Solutions, India

Dec 2023 – May 2024

- Automated internal data workflows using Python/Django, reducing manual processing time by 60%.
- Integrated 5+ third-party data sources (Salesforce, HubSpot, Google Analytics) into a unified, scalable data pipeline architecture.
- Leveraged Django ORM to manage complex relational data models, eliminating 90% of raw SQL dependencies — mitigating SQL injection surface.
- Delivered interactive Power BI dashboards connected to live PostgreSQL data sources for real-time KPI tracking.
- Assessed and remediated authentication flaws and input validation gaps during integration of third-party APIs.

KEY PROJECTS

Apifdf | Lead Developer | Node.js, React, Elasticsearch

- Led development of a trade analytics platform serving 1,800+ active users globally.
- Engineered a Digital Fingerprinting system (OWASP A07: Identification & Authentication Failures) that reduced unauthorized access by 92% — demonstrating applied exploit prevention in a production environment.
- Designed high-entropy device identification to defend against session hijacking and credential stuffing attacks.

Remotexs | Multi-Tenant Architecture | Node.js, React, MongoDB, Express, HPM

- Architected a multi-tenant e-library platform managing 300+ institutional sites (RBI, Symbiosis) through a single codebase.
- Applied HTTP Proxy Middleware (HPM) for secure URL proxying and API gateway routing for 10+ third-party databases.
- Enforced tenant isolation to mitigate OWASP A01 Broken Access Control risks across institutional boundaries.

OPEN-SOURCE & NPM PACKAGES

Code Review Genius | Global NPM Package | Node.js (ESM), Ollama API, Commander.js, Vector Embeddings

- Published a 100% offline, privacy-first CLI developer assistant powered by locally hosted LLMs — automating codebase analysis, unit test generation, documentation, and AI code reviews.
- Private AI Code Review Engine: Integrated static analysis with automated security risk auditing covering path traversal (CWE-22), SQL/command injection (OWASP A03), SOLID/DRY refactoring, and JSDoc/README generation — directly analogous to AppSec vulnerability classification workflows.
- RAG Pipeline: Built a local semantic search engine with AST-aware source scanner, custom sliding-window chunker, and persistent vector store using cosine similarity.
- Git Workflow Integration: Built git utilities to inspect staged changes and generate Conventional Commit messages from diff analysis.

InterviewIQ | Enterprise Behavioral Intelligence & Integrity SDK | TypeScript, React, Node.js, Socket.io

- Architected a high-performance isomorphic TypeScript SDK tracking real-time behavioral signals for digital interview platforms.
- Engineered Browser Integrity module detecting manipulation attempts — addressing OWASP A08 (Software and Data Integrity Failures).
- Built a modular plugin system (Face, Voice, Browser Integrity) with weighted AI Scoring Engine for confidence/engagement telemetry.
- Developed React integration layer with custom hooks, reducing developer integration time by 70%.

Enterprise Digital Fingerprinting & Anti-Fraud SDK | TypeScript, Canvas 2D, WebGL, WebRTC, Monorepo

- Designed a high-entropy device identification SDK using advanced browser APIs to prevent account fraud and bot abuse.
- Engineered Integrity Verification (native function override detection) and Bot Probing — mapping to OWASP A07 and A09 (Security Logging and Monitoring Failures).
- Achieved P95 latency <100ms with a caching layer cutting recalculations by 90%.
- Demonstrated attacker-mindset thinking by modeling real-world bypass techniques to harden the SDK against evasion.

EDUCATION

Master of Science – Information Technology | GLS University, Ahmedabad | 2022

Bachelor of Science – Statistics & Information Technology | Gujarat University, Ahmedabad | 2020
