PROFESSIONAL SUMMARY

Driven Full Stack Developer with 1.5+ years of hands-on experience architecting and shipping scalable web applications, high-performance REST APIs, and data-intensive pipelines. Adept at bridging front-end and back-end with Node.js, React, Python, and Django. Proven track record of reducing query response times by 82% and improving deployment frequency by 5x through microservices architecture.

TECHNICAL SKILLS

Languages: Python, JavaScript (ES6+), TypeScript, SQL, HTML5, CSS3
Frameworks & Libraries: Node.js, React.js, Django, Express.js, Socket.io, Vite, Bootstrap
Databases & Search: MongoDB, MySQL, PostgreSQL, Elasticsearch, Redis
Cloud & DevOps: GitHub Actions, Nginx, Linux Server Management, Git, Docker

PROFESSIONAL EXPERIENCE

Full Stack Developer — Pyther Innovations, India *Jun 2024 – Present*

- Architected and shipped full-stack product features using Node.js and React.js, reducing page load time from 3.2s to 1.1s (65% improvement).
- Optimized database schemas across MongoDB, MySQL, and Elasticsearch, reducing query response time from 450ms to 80ms (82% improvement).
- Built and maintained RESTful APIs handling 5,000 requests/minute with <100ms latency across distributed microservices.
- Championed CI/CD best practices via GitHub Actions pipelines within Agile 2-week sprint cycles.

Python Developer — Spectrics Solutions, India *Dec 2023 – May 2024*

- Automated internal data workflows using Python/Django, reducing manual processing time by 60%.
- Integrated 5+ third-party data sources (Salesforce, HubSpot, Google Analytics) into a unified, scalable data pipeline architecture.
- Leveraged Django ORM to manage complex relational data models, eliminating 90% of raw SQL dependencies.
- Delivered interactive Power BI dashboards connected to live PostgreSQL data sources for real-time KPI tracking.

KEY PROJECTS

Remotexs | Multi-Tenant Architecture | Node.js, React, MongoDB, Express, HPM

- Architected a multi-tenant e-library platform managing 300+ institutional sites (RBI, Symbiosis) through a single codebase.
- Applied HTTP Proxy Middleware (HPM) for secure URL proxying and API gateway routing for 10+ third-party databases.

Apifdf | Lead Developer | Node.js, React, Elasticsearch

- Led development for a trade analytics platform serving 1,800+ active users globally.
- Executed a Digital Fingerprinting system that reduced unauthorized access by 92%.

OPEN-SOURCE & NPM PACKAGES

Code Review Genius | Global NPM Package | Node.js (ESM), Ollama API, Commander.js, Chalk, Simple-Git, Vector Embeddings

Developed and published a 100% offline, privacy-first CLI developer assistant powered by locally hosted LLMs via Ollama, automating codebase analysis, unit test generation, documentation, and AI code reviews directly from the terminal.

- RAG Pipeline: Designed a local semantic search engine from scratch with an AST-aware source code scanner, custom sliding-window chunker with overlapping boundaries, and a persistent vector store using brute-force cosine similarity over embeddings generated by nomic-embed-text.
- Private AI Code Review Engine: Integrated qwen2.5-coder:7b for deep static analysis, security risk auditing (path traversal, injection risks), SOLID/DRY refactoring suggestions, and structured JSDoc/README documentation generation.

- Interactive REPL & CLI UX: Engineered a fully-featured interactive REPL with context tracking, dynamic model switching, custom slash commands (/clear, /model, /rag), and real-time streaming LLM outputs formatted with chalk and marked.
- Git Workflow Integration: Built automated git utilities using simple-git to inspect staged changes and generate Conventional Commit messages from actual diff analysis.
- Published to the NPM registry as code-review-genius with global binary aliases for seamless execution across any local development workspace.

InterviewIQ | Enterprise Behavioral Intelligence & Integrity SDK | *TypeScript, React, Node.js, Socket.io, MongoDB, Vite*

- Architected a high-performance, isomorphic SDK in TypeScript to track real-time behavioral signals for digital interview platforms.
- Engineered a weighted AI Scoring Engine to calculate candidate confidence and engagement via real-time telemetry.
- Designed a modular Plugin System for specialized trackers (Face, Voice, Browser Integrity).
- Developed a React-native integration layer with custom hooks, reducing developer integration time by 70%.

Enterprise Digital Fingerprinting & Anti-Fraud SDK | *TypeScript, Advanced Browser APIs (Canvas 2D, WebGL, WebRTC), Monorepo*

- Designed a high-entropy device identification SDK using Advanced Browser APIs to prevent fraud.
- Engineered security features including Integrity Verification (native function overrides) and Bot Probing.
- Achieved P95 latency of <100ms and implemented a persistent caching layer reducing recalculations by 90%.

EDUCATION

Master of Science – Information Technology | GLS University, Ahmedabad, Gujarat | 2022

Bachelor of Science – Statistics & Information Technology | Gujarat University, Ahmedabad, Gujarat | 2020

LANGUAGES

English: Professional working proficiency | **Hindi:** Native / Full professional proficiency
